North Macedonia (Remote, CET) | tracemind.app

PROFESSIONAL SUMMARY

Senior full-stack engineer (TypeScript, React/Next.js, Node.js) with **7 years of experience** building for European clients, as an employee and as a contractor. I build multi-provider APIs, payment flows and AI features, and ship them with rehearsed deploys and tested rollbacks. Most recently: Directus CMS integrations for a multi-brand online platform. Since 2020: web app, website and e-commerce work for Laigo, a German AI company, and its related businesses, including three years in Laigo's Skopje office. I also co-founded StrongEsim, an eSIM platform, and build AI automation (LLM content pipelines, local models via Ollama, agentic coding workflows) and products of my own, including TraceMind and Tansira. Open to B2B contract or employment.

TECHNICAL SKILLS

Frontend: TypeScript, React 19, Next.js 16 (App Router, SSR), Vue 3, Angular, Redux Toolkit, Tailwind CSS
Backend & APIs: Node.js, Express, PHP/Symfony, REST, GraphQL, WebSockets, BullMQ, OpenAPI, Zod
Data: PostgreSQL (incl. PostGIS), MySQL, SQLite, MongoDB, Redis, Prisma, Drizzle, Sequelize
CMS & Commerce: Directus 11 (Flows, data modeling), Payload CMS 3, WordPress, WooCommerce, Elementor, PrestaShop, Shopify API
Payments & Auth: Stripe, PayPal, Braintree, Paddle, NestPay, Keycloak, OAuth 2.0/OIDC, JWT
AI & Automation: n8n, LLM APIs with SSE streaming (OpenAI, Anthropic, Gemini, Groq), local embeddings (Transformers.js), Ollama (Qwen), Claude Code, Codex CLI
DevOps: Docker, Traefik, Nginx, Caddy, GitHub Actions, GitLab CI, Linux, Hetzner, Cloudflare, Vercel
Mobile & Testing: React Native, Flutter, Jest, Vitest, React Testing Library, Playwright, Cypress
Languages: Turkish (native), English (fluent), Macedonian (fluent)

PROFESSIONAL EXPERIENCE

FU-SHA DOOEL — Founder & Lead Full-Stack Engineer — Apr 2024 – Oct 2026

Own company, North Macedonia · B2B contract for a multi-brand online platform, remote

- Built Directus Flows that fetch products, providers and categories from external servers and aggregator APIs and write them into the platform's collections for a multi-brand setup (3,000+ products, 4 brands).
- Normalized the Directus data model: unified products, provider and category collections, consistent snake_case schema, M2M product–category relations, and field documentation for the team.

Laigo GmbH & related businesses — Software Developer — Apr 2020 – Present

Freelance 2020–2022 · employee at Laigo's Skopje company 2022–2025 · freelance since 2025
Friedrichshafen, Germany · related businesses under the same CEO

- **Laigo API Platform (2023–2025):** lead frontend developer of an AI document-processing SaaS with a team of 2–4, and top contributor (~60% of 1,300 commits, ~29k lines of React 18). Built the SmartLedger and SmartID tools from scratch and the retry and polling logic of the shared upload → edit → regenerate → export flow, with Redux Toolkit, TanStack Table and an in-browser PDF preview.
- Implemented Keycloak OIDC login (PKCE, silent SSO, token refresh through Axios interceptors, role-based routes), Stripe Embedded Checkout and, before it, Braintree Drop-in with 3-D Secure. Added usage dashboards, user and role admin, shared shadcn/ui components, 5 languages, and env-based switching across 4 deployments, including a white-label partner. Earlier, built its Vue 3 portal for subscriptions, uploads and OCR results.
- **Laigo identity service (Keycloak, 2022–2025):** one of the main contributors (~73 commits). Built the custom login, registration, account and email theme from Figma designs (FreeMarker, PatternFly, HTML/CSS/JS), then a v2 redesign alongside the live theme. Added German and Macedonian translations, consent and password-policy validation, social-login styling and accessibility fixes; standardized the Keycloak version across dev and prod Docker setups and fixed first-time OAuth client setup.
- **laigo.ai:** redesigned the WordPress frontend and ran its remediation as rehearsed, scripted releases with tested rollbacks: removed plugins exposing 3.3 GB of public backups, moved database-stored PHP into version-controlled mu-plugins, cut desktop CLS from 0.347 to 0 and added SEO/GEO structured data. Prototyped a coding-assistant UI in Next.js on Laigo's own model.
- **laigo.ai rebuild:** Next.js 16 static export with Payload CMS 3 and PostgreSQL, React 19, Tailwind CSS 4, Vitest, Playwright and GitLab CI; Lighthouse 78 → 97 and HTML 150 → 58 KB, with CMS builds byte-identical to Git builds. Test environment ready; launch pending.

- **ruderschuhe.com** (WooCommerce, EN/DE/FR): country-based ordering, product page redesign, B2B pricing and local pickup, EU withdrawal-rights and consumer order-restriction plugins (211 unit checks), cache fixes and ongoing maintenance. Fixed a payment bug where Trustly orders were marked paid before settlement, with a fail-closed plugin and unit tests.
- **JLsport:** redesigned the PrestaShop store with custom Symfony modules and lazy-loaded filtering for all products.
- **mybimaxx.com:** moved the BFR blog from blog.mybimaxx.de to its own .com domain with path-preserving redirects and resolved its Google Search issues; shipped a scripted WordPress 7 update with backups, health gates and rollback, verified by Playwright consent checks.
- **bauner.com:** replaced WordPress with a dependency-free static site, released through staging with instant rollback; earlier (2020–2022), performance optimization and Elementor migration.

StrongEsim — Co-founder & Full-Stack Engineer **2023 – Present**

Co-founded eSIM business · B2B partner portal, API, B2C store and mobile app

- Built StrongEsim's B2B partner portal (partners.strongesim.com, Next.js 15) and B2C store (strongesim.com, Next.js 16) on one API: 3,000+ eSIM products, PayPal Card Fields with 3-D Secure and automatic refunds when activation fails, Stripe, and Docker behind nginx with backup, health-check and auto-rollback deploys.
- Designed the modular eSIM API (api.strongesim.com; Node.js 22, Express, Sequelize, PostgreSQL, Redis, BullMQ) over four providers with fallback: a prepaid wallet and credit ledger with PayPal and Stripe top-ups, low-balance checks, Shopify order provisioning, partner webhooks, scheduled price sync and invoicing, and Swagger docs for internal and partner use.
- Built the React Native eSIM app, live on Google Play and the App Store (React Native 0.84, New Architecture): Stripe card and Apple Pay checkout, Google and Apple sign-in, Keychain-secured sessions and eSIM QR codes.

Technoperia — Angular Front-End Developer **Nov 2019 – Apr 2020**

- Built an Angular admin dashboard with Chart.js charts, code splitting and lazy loading.

PRODUCTS & PROJECTS

- **TraceMind** (tracemind.app): privacy-first Chrome extension (Manifest V3) for semantic search across browser history, live on the Chrome Web Store: on-device embeddings with Transformers.js (WebGPU, WASM fallback), hybrid vector and full-text search merged with Reciprocal Rank Fusion, and chat streaming from OpenAI, Anthropic and Gemini. Next.js 16 site with Paddle billing and Ed25519-signed licenses.
- **Mojauto** (mojauto.mk, client project): car-listings marketplace for North Macedonia in Macedonian and Albanian (Next.js 16, Drizzle, PostgreSQL): hand-built Google OAuth, signed sessions and email OTP, Halkbank NestPay payments with idempotency, S3/R2 image storage, and one-command deploys with automatic rollback.
- **Glocal Spectrum** (glocalspectrum.net, client project): publication archive and interactive map atlas (Next.js 16, PostgreSQL with PostGIS and pg_trgm fuzzy search, MapLibre) in resource-limited Docker containers, with scripted deploys and rollback.
- **Tansira:** offline-first, privacy-first blood-pressure tracker for iOS and Android (React Native 0.83, Feature-Sliced Design, SQLCipher-encrypted SQLite, opt-in Firebase sync, HealthKit and Health Connect) with four clinical guideline systems and family sharing; launching soon.
- **Educational Corner (launching soon):** self-hosted multilingual publishing platform for psychology and education articles (Next.js 16, React 19, TypeScript, Directus 11 on PostgreSQL): server-only CMS access, an allowlisted image proxy, sanitized rich text, per-language publishing rules with RTL support, and full SEO (sitemaps, RSS, JSON-LD, OG images). Playwright and axe-core tests run against throwaway Docker environments.
- **AI content pipeline:** self-hosted n8n workflow (Hetzner VPS, ~195 nodes) that researches, writes, reviews and publishes posts for both products: SearXNG and Tavily research with an evidence check, a five-step LLM chain, final QA, Telegram approval gates and a publish safety gate.
- **Local LLMs & agentic coding:** set up a local Qwen model with Ollama; designed an agentic development workflow for Claude Code and Codex CLI (custom skills, subagents, deterministic safety hooks, planning state kept outside the repos).

EDUCATION

Bachelor of Computer Science (Honours) – Software Engineering 2019

Multimedia University, Cyberjaya, Malaysia
